Profile

Enthusiastic and detail-oriented Junior Backend Developer with a strong foundation in PHP, Laravel, and MySQL. Eager to leverage academic knowledge and practical skills to contribute effectively to backend development projects. A quick learner with a passion for writing clean and efficient code.

Education

bachelor's degree in computer engineering
Modern Academy For Engineering & Technology

2020/10 – 2025/06

Professional Experience

I trained in syntack code company

2023/09 – 2024/01

I trained in Orange Digital Center

2022/11 – 2023/01

Experience

Note_app

The PHP Note App is a web-based note-taking application designed to help users organize and manage their notes effectively. This application provides a user-friendly interface for creating, editing, and deleting notes. The project is built using PHP for server-side scripting and MySQL as the database to store and retrieve note data.

Blog_system

The PHP OOP Blog System is a robust and extensible web application designed for creating and managing blog content. Built on the principles of Object-Oriented Programming, this system provides a modular and organized structure for handling blog posts, categories, user management, and more. The application utilizes PHP for server-side logic, OOP for code structure, and MySQL for data storage.

MultiVendorStore

The Laravel Multi-Vendor E-commerce Store is a robust and scalable online marketplace that allows multiple vendors to register, manage their products, and sell them to customers through a centralized platform. The project is developed using Laravel, a PHP framework, and MySQL as the database, following SOLID principles to ensure a modular and maintainable codebase.

Posts_app

The Laravel Posts App is a RESTful API backend designed to handle the creation, retrieval, updating, and deletion of posts. This application allows users to interact with a collection of posts through HTTP methods, following REST principles. Laravel serves as the backend framework, providing a robust foundation for building scalable and maintainable APIs.

MySQL is used as the database for storing post data.

worker_system

The Laravel Worker System API is a comprehensive solution for managing posts, users, workers, and post photos through RESTful endpoints. This application is built using Laravel, providing a scalable and maintainable backend for a worker management system. MySQL is utilized as the database for storing data related to posts, users, workers, and post photos.
